

iOS Technical Challenge - Schedule

Exercise 2: Structure

The app start with an empty overview and a add button in the top right

When the add button is pressed the schedule screen as created in Exercise 1 will be shown, with the same functionality.

Again like before the data can be edited and the begin and end date will update accordingly.

When pressing the back button the created schedule is saved and shown in the list. From here either a new schedule can be created or an existing one can be edited. The overview is sorted primarily by the begin date and secondary by the end date.

Tapping on a schedule in the overview will open the schedule screen with the dates from the overview. You are able to edit the entries and when pressing back see the changes in the overview

BONUS: as a bonus add the ability to remove schedule items. Only do this if you have the time.
